

CS 452/552: Operating Systems

Instructor

Instructor: Jim Buffenbarger
Office: CCP-359
Voicemail: (208) 426-3567
Email: <mailto://buff@cs.boisestate.edu>
WWW: <http://csweb.boisestate.edu/~buff>

Meetings

Lectures: TuTh 4:30–5:45 CCP-260
Office hours: TuTh 2:45–3:45 CCP-359
by appointment CCP-359

Lectures will be audio/video recorded, and made available, afterwards.

Our Teaching Assistant is:

TBA

TA office hours are at (this “pub” directory is explained, below):

[pub/TutorOfficeHours](#)

I am happy to answer questions by email. Please please click [here](#), or see:

[pub/doc/EmailQuestions.pdf](#)

Catalog Description

Operating systems structure and design. Process management, concurrency and synchronization, interprocess communication, scheduling, device management, memory management, file systems and security. Case studies of multiple operating systems.

PREREQ: CS 230, CS 253, CS 321, ECE 330, and CS 155.

Goals

Students are introduced to basic concepts of operating systems, including:

- using processes and threads
- operating system organization
- computer organization
- device management
- implementing processes and threads
- scheduling
- synchronization
- interprocess communication
- deadlock
- memory management
- virtual memory
- file management
- security
- networks

Textbook

Operating Systems: Three Easy Pieces, by A. Arpaci-Dusseau and R. Arpaci-Dusseau, 2018, [online](#).

Other Course Material

This syllabus, lecture slides, assignments, and other material is available in what we'll call our “pub” directory, on our Computer Science Lab (CCP-240, CCP-241, and CCP-242) computers, served by `onyx.boisestate.edu`. The directory is at:

`~jbuffenb/classes/452/pub`

This directory is read-only. So, you might want to copy it, perhaps to your local computer. Since **onyx** services Secure Shell (SSH) requests, you can use SSH clients (e.g., **scp** and **sftp**) to do so. However, beware: It contains symbolic links to parent directories, and **scp -r** will unconditionally follow them, thereby looping forever. To avoid this, use **sftp** or **tar/ssh**, as needed.

A copy of this directory can be accessed from our [Canvas](#) website, via the “Files” tab on the left sidebar. This copy is updated less frequently, since bulk upload is slow. Furthermore, although lecture slides can be viewed, the Canvas PDF viewer will not follow links to other files.

A copy of this directory can also be accessed via [GitHub](#).

You may also find the following local guide useful:

[pub/etc/cs-linux.pdf](#)

In particular, it explains how to use SSH.

Grades

At the end of the semester, the Registrar requires a letter grade for each student. Accordingly, during the semester, homework and exams are evaluated, and numeric scores are assigned. Each such artifact is worth a certain number of points, and has a weight. From these scores, a student’s overall numeric/raw percentage is computed.

Collectively, a class’s raw percentages form a distribution, with a mean and standard deviation, sometimes called a Bell Curve. An algorithm normalizes these values into a “grading” distribution, with a desired mean and standard deviation of 85 and 10 (i.e., the values are “curved”). A normalized value is then mapped to a letter grade, in the conventional way. If you are interested in the gory details, click [here](#).

During the semester all of this evolving data can be found in our **pub** directory, on **onyx**, its nodes, Canvas, and GitHub.

Homework is due at 11:59PM, Mountain Time, on the day it is due. Late work is not accepted. To submit your solution to an assignment, login to a lab computer, change to the directory containing the files you want to submit, and execute:

```
submit jbuffenb class assignment
```

For example:

```
submit jbuffenb cs452 hw1
```

The `submit` program has a nice `man` page.

When you submit a program, include: the source code, sample input data, and its corresponding results.

Scores are posted in our `pub/scores` directory, as they become available. You will receive a code, by email, indicating your row in the score sheet. You are encouraged to check your scores to ensure they are recorded properly. If you feel that a grading mistake has been made, contact me as soon as possible.

The weights of homework and exams is shown in the table below:

<i>Activity</i>	<i>Weight</i>
Homework	80%
Exam	10%
Final	10%

Homework

Several homework problems are assigned during the semester. Each asks you to develop software in the C programming language. Students work on these individually.

The rubric that will be used to grade each assignment is distributed with the assignment. Try to focus on the assignments, rather than the rubrics.

Exams

An exam and a final are administered. These are in-class, open-note, open-textbook, and open-laptop tests. Students work on these individually.

Graduate-Student Grades

This is a dual-listed section: containing undergraduate and graduate students.

Graduate students are assigned extra work: additional assignments, or additional parts of existing assignments. It may take the form of software development, or research and in-class presentation. Details are determined by the number of graduate students enrolled. In any event, rubrics will reflect this extra work.

For graduate students, the “grading” distribution, discussed above, is different. It has a mean and standard deviation of 80 and 10. The effect is that a graduate student is expected to “do better” than an undergraduate student.

Attendance

In-person lecture attendance is an important part of course participation. Attendance is taken at each lecture: starting five minutes before the scheduled start time, and ending fifteen minutes after the scheduled start time. Attendance is not taken during the first week of classes, holidays, or finals week.

Attendance can affect your grade. Each absence results in a one-percent reduction of your overall normalized percentage. Since a few absences are expected, completion of BSU’s on-line end-of-semester course evaluation will erase up to five absences.

Attendance is administered wirelessly, via the iClicker app, available for free, from your smartphone’s app store. For more information, click [here](#).

Source-Code Documentation

Good documentation and programming style is very important. Your programs must demonstrate these qualities for full credit. Good documentation and programming style includes:

- heading comments giving: author, date, class, and description
- function/procedure comments giving description of: purpose, parameters, and return value
- other comments where clarification of source code is needed
- proper and consistent indentation
- proper structure and modularity

For more information, and examples, click [here](#).

Academic Integrity

The University’s goal is to foster an intellectual atmosphere that produces educated, literate people. Because cheating and plagiarism are at odds with that

goal, those actions shall not be tolerated in any form. Academic dishonesty includes assisting a student to cheat, plagiarize, or commit any act of academic dishonesty. Plagiarism occurs when a person tries to represent another person's work as his or her own or borrows directly from another person's work without proper documentation.

If a student engages in academic dishonesty, the student may be dismissed from the class and may receive a failing grade. Other penalties may include suspension or expulsion from the University.

For much more information about academic integrity, including examples of academic dishonesty, please click [here](#). If you are unsure about a particular behavior, ask your instructor.

Labs and Safety

Each student receives an account on the cluster of computers in the Computer Science Labs: CCP-240, CCP-241, and CCP-242. The cluster comprises a server named `onyx.boisestate.edu` and a set of nodes with shared home directories. It is remotely accessible, via SSH. The cluster runs the Linux operating system.

Physical access requires building and room access. After-hours building access, and all-hours room access, require an authenticated proximity-type student-identification card.

You are responsible for understanding and obeying lab [rules](#).

Schedule

<i>Week</i>	<i>Date</i>	<i>Topic</i>	<i>Assigned</i>	<i>Due</i>	<i>Reading</i>
1	Aug 22 Tue	Introduction			1-2
	Aug 24 Thu	Processes and Processors	HW1		3-11
2	Aug 29 Tue				
	Aug 31 Thu			HW1	
3	Sep 05 Tue		HW2		
	Sep 07 Thu				
4	Sep 12 Tue				
	Sep 14 Thu				
5	Sep 19 Tue	Memory	HW3	HW2	12-24
	Sep 21 Thu				
6	Sep 26 Tue				
	Sep 28 Thu				
7	Oct 03 Tue	Concurrency		HW3	25-34
	Oct 05 Thu				
8	Oct 10 Tue		HW4		
	Oct 12 Thu				
9	Oct 17 Tue	Exam			
	Oct 19 Thu				
10	Oct 24 Tue				
	Oct 26 Thu			HW4	
11	Oct 31 Tue				
	Nov 02 Thu				
12	Nov 07 Tue	Input/Output Devices	HW5		35-42
	Nov 09 Thu				
13	Nov 14 Tue				
	Nov 16 Thu				
14	Nov 21 Tue	Thanksgiving			
	Nov 23 Thu	Thanksgiving			
15	Nov 28 Tue				
	Nov 30 Thu			HW5	
16	Dec 05 Tue				
	Dec 07 Thu				
17	Dec 14 Thu	Final: 12:00-2:00
